Part of the graph of  $y = a \cos x^\circ + b$  is shown below.

- (a) Explain how you can tell from the graph that  $a = 3$  and  $b = -1$ . 2
- (b) Calculate the  $x$ -coordinates of the points where the graph cuts the  $x$ -axis. 4

Answers:

- (a)  $a = 3$  because  $2 - (-4) = 6$ , which is  $3 \times (1 - (-1))$ .  
 $b = -1$  because the graph of  $y = 3 \cos x$  has been moved down 1.
- (b)  $70.5^\circ, 289.5^\circ$

**Question 9**

Write the following in order of size starting with the smallest.

$\cos 90^\circ$

$\cos 100^\circ$

$\cos 300^\circ$

Justify your answer.

**2**

Question 15

A wind turbine has three blades as shown below.

The height,  $h$  metres, of the tip of blade A above the ground in each rotation is given by

$$h = 40 + 23 \cos x^\circ, \quad 0 \leq x < 360$$

where  $x$  is the angle blade A has turned clockwise from its vertical position.

- (a) Calculate the height of the tip of blade A after it has turned through an angle of  $60^\circ$ . 1
- (b) Find the minimum height of the tip of blade A above the ground. 1
- (c) Calculate the values of  $x$  for which the tip of blade A is 61 metres above the ground. 4

Answers:

- (a) 51.5 m  
(b) 17 m  
(c)  $24.1^\circ$  and  $335.9^\circ$

The diagram shows the part of the blade of a circular saw above a workbench.

As the blade rotates, the height,  $h$  millimetres, of point T above the workbench is given by

$$h = 57 - 85 \cos x^\circ$$

where  $x$  is the angle the blade has turned anti-clockwise from a starting position.

- (a) Calculate the value of  $x$  when point T is first at a height of 115 millimetres above the workbench. 3
- (b) Calculate the value of  $x$  when point T is next at this height. 1
